

Creating a Green Footprint

Have you ever wondered how you could reduce the emissions of greenhouse gases on a daily basis?

Are you looking for heating and cooling options that can save you money while protecting the environment?

Are you interested in “greening” your business or community by planting trees?

If you answered yes, then this workshop is designed for you!

What will be covered?

- How to reduce greenhouse gas emissions daily
- Cost and GHG emission analysis of multiple heating and cooling options
- Insight into creating a forestry program
- Guidance on tree planting and sapling care

Participants will leave knowing the basics of how to reduce greenhouse gas emissions through everyday activities, heating and cooling and planting a tree. Participants will not become experts, but will gain a general overview in order to create a green footprint. Each attendee will leave the workshop with a free sapling to plant. Seating is limited, so reserve your spot today!
