

Floodplain, Streams and Wetlands Compliance Workshop

Have you ever needed to conduct work in a stream, such as removing debris or adding fill material?

Have you been faced with constructing a bridge or culvert in or near wetlands or streams?

Have you ever wondered if you were working in a floodplain?

If you answered yes, then this workshop is designed for you!

The purpose of the workshop is to educate attendees on the hot topics and key points of the 401 Water Quality Certification, 404 U.S. Army Corps of Engineer Permits, and Floodplain Stream Construction Programs. Participants will leave knowing the basics of the programs, what questions to ask before beginning any project and who to contact at the Department for Environmental Protection. Participants will not become experts in the programs, but will gain a general overview in order to avoid regulatory compliance issues. The workshop will rely on participation by the audience for experiential learning. See our [agenda](#).

Do you have questions or comments?
